--24. A method of screening for therapeutic compounds effective in treating an inflammatory condition mediated at least in part by the $\alpha_9\beta_1$ integrin, which method comprises:

adding a test compound to an assay system which measures an amount of alpha-9 integrin binding to an alpha-9 integrin ligand, and

selecting the test compound as an effective therapeutic drug candidate, if said compound exhibits, in said assay, a binding inhibitory activity that is at least 1/1000 as potent as an activity exhibited by a compound selected from the group consisting of:

D1 N-(toluene-4-sulfonyl)-L-prolyl-L-4(4-methylpiperzin-1-ylcarbonyloxy)phenylalanine,
